

Curriculum Vitae

Personal Details

Name: DANG VAN Y
Mobile: 0908133919 | **Email:** y.dangvan@gmail.com
Gender: Male
Marital Status: Married
Citizen of: Vietnam
Position Applied: Product Designer (UI/UX/AI)

Introduction

Product Designer with strong foundation in information architecture, visual hierarchy, accessibility, and cognitive load management. Experienced across e-commerce, marketplace, and dashboard products with empathy-driven approach—watching users, reconstructing mental models, and identifying unstated frustrations. Specialized in organizing dense, multi-dimensional datasets and deciding what surfaces when, what's grouped, what's hidden. AI-native and Claude-fluent with daily usage for iteration and prototyping. Frontend-curious, willing to ship UI changes via Claude with engineer coaching. QA-grade attention for spotting obscure flow breaks. Agency-driven: spot, fix, ship without waiting. Experience theming partner storefronts with multi-language and RTL support (Hebrew, Polish, Spanish). Data-driven using Mixpanel, GA4, GTM funnel data for CTA optimization. Design system work focused on AI-legible patterns. English proficient for async collaboration.

Career Summary

Timeline	Company & Position
Sep 2024 to present	GEAR INC - Product Designer - end-to-end UX/UI for web & app marketplace & e-commerce products
Nov 2022 to 2024	SACOMBANK - Senior Product Designer - UX/UI, design systems & omni-channel banking (web & mobile)

Sep 2018 to 2022	PRUDENTIAL FINANCE - Senior Product Designer - flows, UI & design strategy for financial apps (multi-device)
Jul 2015 to Aug 2018	RINGER VIETNAM - UI Designer / Graphic Designer - web & digital product UI, UX flows & prototyping

Professional Experience

GEAR INC (Sep 2024 to Present)

Product Designer

- **Product design across three platforms:** Owned UX/UI for marketplace e-commerce customer-facing pages, operator dashboard for managing bookings and inventory, and member portal; translated complex product requirements into information architecture and interaction design.
- **Information architecture and empathy:** Watched users through recordings and onboarding calls to reconstruct mental models; identified frustrations users stopped voicing; organized dense multi-dimensional data (bookings, spaces, times, prices, members, policies) and decided what surfaces when, what's grouped, what's hidden until needed.
- **Visual hierarchy and cognitive load:** Applied strong foundation in visual hierarchy, accessibility, error prevention, and cognitive load management; designed clear information flows for operators juggling hundreds of spaces and for customers making quick booking decisions.
- **AI-native design workflow:** Daily Claude user for design iteration and prototyping; iterated on structured prompts to generate UI adjustments; worked with engineers who coached and set guardrails for shipping UI changes directly into codebase via AI.
- **Partner storefront theming:** Themed partner storefronts by adapting brand identity (logo, fonts, palette, tone) across e-commerce surfaces; handled multi-language adaptation including RTL scripts (Hebrew), diacritics (Polish), and Spanish localization for native brand experience.
- **CTA optimization and funnel work:** Recommended CTA placements on partner marketing sites to maximize funnel into checkout; used data-driven approach analyzing revenue, Mixpanel events, and GA4/GTM funnel data to inform design decisions and surface UX issues.
- **Design system AI-legibility:** Documented design system patterns (empty states, errors, modals, forms, badges, toasts) to be AI-legible; named and exemplified each pattern so Claude could pick correct components from prompts; codified repeating patterns as reusable components with heuristics.
- **QA-grade attention to detail:** Audited flows across all three apps to surface obscure UX issues including transitions, empty states, error states, micro-copy; spotted misaligned states and off-by-one transitions before deployment.

- **Agency and ownership:** Spotted things, fixed things, shipped things without waiting to be told; took ownership of UX critique across dashboard, e-commerce, and member portal with direct collaboration with CTO and product team.

SACOMBANK VIETNAM (Nov 2022 to 2024)

Senior Product Designer

- **Product design for complex platforms:** Designed for web and mobile banking applications where users juggled accounts, transactions, transfers, and compliance workflows; translated dense requirements into clear information architecture.
- **Information design and hierarchy:** Organized complex multi-dimensional data (accounts, transactions, policies, limits, history) and applied visual hierarchy principles to surface most relevant information; managed cognitive load for users making financial decisions.
- **User empathy and research:** Watched user behavior and gathered feedback through product discussions; identified UX problems from analytics and usability observations; reconstructed user mental models to inform design decisions.
- **Design system and component documentation:** Built reusable Figma components, patterns, and shared libraries with auto layout and variants; documented component rules, interaction guidelines, and design tokens for consistency across products.
- **Attention to detail:** Ensured error prevention, clear error states, and accessibility across banking interfaces; focused on clarity, trust, and reducing confusion in high-stakes financial flows.
- **Data-driven iteration:** Used analytics and user feedback to identify UX issues; iterated designs based on user problems, business goals, and technical feasibility; adapted quickly based on engineering constraints.
- **Collaboration and agency:** Worked directly with product managers, engineers, and business teams; took ownership of design decisions and shipped solutions without constant follow-up.

PRUDENTIAL FINANCE (Sep 2018 to 2022)

Senior Product Designer

- **End-to-end product design:** Owned user flows, wireframes, prototypes, and UI screens for financial applications across multiple devices; focused on information architecture to organize complex financial data and policy information into clear, usable journeys.
- **User-centered approach:** Watched user behavior through usability sessions and feedback; identified UX problems from business objectives and user constraints; reconstructed mental models to inform practical design solutions.
- **Visual hierarchy and accessibility:** Applied visual hierarchy, accessibility principles, and error prevention to financial interfaces; designed for clarity and reduced cognitive load in decision-making flows.

- **Iterative and data-informed:** Iterated designs based on user problems, usability findings, and team feedback; adapted quickly to technical constraints and learned continuously through critique sessions.
- **Collaboration and ownership:** Worked with product managers, engineers, QA, and business teams during Agile ceremonies; asked clarifying questions when requirements unclear; took ownership of design deliverables and shipped on time.

RINGER VIETNAM (Jul 2015 to Aug 2018)

UI Designer / Graphic Designer

- **UI and information design:** Gathered requirements and translated them into wireframes, responsive layouts, and UI designs for landing pages, websites, and digital products; organized content structure and information hierarchy for user clarity.
- **Visual design and brand adaptation:** Created interface layouts and graphic assets using Photoshop, Illustrator, and AI; applied layout composition and color systems; adapted designs to match brand guidelines and maintain consistency across screen sizes.
- **Client collaboration:** Worked with business owners and developers to deliver usable interfaces; iterated based on feedback; completed assignments efficiently with strong attention to detail and commitment to timelines.

Academic Background

2001 to 2005: Bachelor of Design and Multimedia, Major in Communication Design, RMIT Vietnam

Skills and Knowledge

- **Visual hierarchy, IA, and accessibility:** Solid UI/UX fundamentals including visual hierarchy, information architecture, accessibility, error prevention, and cognitive load management; can name heuristics being applied and explain design rationale.
- **Human empathy and user-centered design:** Watch users through recordings and sessions to reconstruct mental models they operate under; identify frustrations they've stopped voicing; let user situations shape design decisions rather than applying heuristics first.
- **Information design for complex data:** Organize dense, multi-dimensional datasets (bookings × spaces × times × prices × members × policies) and decide what to show, what to hide, what to group, how to layer information; empathy as input, information architecture as output.
- **Product design across platforms:** Experience designing for e-commerce customer-facing pages, operator dashboards for managing inventory and bookings, and member portals; translate complex requirements into clear user flows and interaction patterns.

- **AI-native and Claude-fluent:** Daily Claude user with sharp prompting skills; iterate on structured prompts for design work; understand where AI shines and where it breaks down; use AI as peer for design iteration and prototyping.
- **Frontend-curious with shipping ability:** Willing to ship UI changes directly into codebase via Claude with engineer coaching and guardrails; understand HTML, CSS, and frontend development constraints; adapt designs based on technical feasibility.
- **QA-grade attention to detail:** Spot obscure flow breaks, misaligned states, off-by-one transitions, empty states, error states, and micro-copy issues; audit flows across products to surface UX problems before deployment.
- **Agency and ownership:** Spot things, fix things, ship things without waiting to be told; take ownership of UX critique and design decisions; expose reasoning for team calibration; drive work end-to-end with measurable impact.
- **Partner theming and brand adaptation:** Theme partner storefronts by taking brand identity (logo, fonts, palette, tone) and adapting e-commerce surfaces to feel native; handle multi-language and RTL scripts including Hebrew, Polish diacritics, Spanish, and English.
- **CTA optimization and conversion:** Recommend CTA placements on partner marketing sites to maximize funnel into checkout; understand conversion optimization and booking-flow psychology; design for revenue impact.
- **Data-driven design decisions:** Pull and analyze data from Mixpanel, GA4, GTM funnel analytics, and revenue metrics; form opinions based on data; identify where design hours move business most; prioritize based on funnel impact and churn signals.
- **Design system AI-legibility:** Make design systems AI-legible by documenting patterns (empty states, errors, modals, forms, badges, toasts) with clear naming and examples; codify repeating patterns as reusable components with prompt-friendly heuristics so Claude can pick correct components.
- **E-commerce and marketplace experience:** Design booking flows, product catalogs, checkout experiences, and marketplace interfaces; understand conversion funnels, cart abandonment, and customer decision-making; experience with member portals and operator dashboards.
- **Interactive prototyping:** Build full product flows with state, hover, transitions wired up using Figma prototypes; create clickable, end-to-end flows for user testing and stakeholder review; prototype UI adjustments for iteration.
- **English for async collaboration:** Strong English writing and reading skills for async-first work across distributed teams; document design decisions, write clear rationale, and collaborate effectively with international stakeholders.

Languages: English (Fluent - writing/reading), Vietnamese (Native)

Portfolio

- Vietpay Platform (GEAR INC project) - [View link](#)

- MMS Platform (GEAR INC project) - [View link](#)
- WWE Champions Game - [View link](#)
- Sacombank Web& App - [View link](#)
- HDBank Mobile App - [View link](#)
- Outdoors Marketplace - [View link](#)
- Third Place Marketplace - [View link](#)
- EVN App - [View link](#)
- Propzy Mortgage - [View link](#)
- Other Apps - [View link](#)
- Other Designs Layouts - [View link](#)
